E-Documents with SecureVideo

Explore the Advantages of a Comprehensive E-Document Solution

Transform Your Telehealth Practice with Secure E-Documents

E-Documents are an essential part of our telehealth platform, as they provide a way for clinicians to easily store and access information across systems. Offering a wide range of benefits, providers and patients alike can enjoy an elevated telehealth experience with this solution.

1 **STREAMLINED PATIENT DATA COLLECTION**

E-Documents help to streamline workflows by automating paperwork and allowing all patient information to be collected before or after a session, saving time for both patient & provider.

2 **VERSATILE FORMS**

Forms can be templated to include all the same questions as a healthcare practice's physical forms. This may include text boxes, drop-downs, radio buttons, check boxes and date fields.

3 **E-SIGNATURE CAPABILITIES**

Legally binding documents, such as a telehealth consent form, can be completed quickly and easily using e-signatures.

4 **SECURE STORAGE OF SENSITIVE PATIENT DATA**

Once a document has been completed, it is stored in a safe environment where it cannot be accessed by any unauthorized parties.

5 **API INTEGRATION (ADVANCED CONFIGURATION)**

With our API integration, providers can require participants to fill out detailed forms with the individual field data automatically updating in their EHR. The API can also be configured to store completed E-Documents in the EHR as a PDF with auditable digital signature.
