

5 ADVANTAGES OF SECUREVIDEO'S E-DOCUMENTS FEATURE

SecureVideo's E-Documents feature revolutionizes telehealth by delivering a range of key benefits, such as streamlined workflows and enhanced data security in storing patient data. It also provides clinicians with a seamless way to store and access information across different systems. Read about some of the following key advantages of integrating E-Documents into your telehealth practices.

STREAMLINED PATIENT DATA COLLECTION

E-Documents streamline workflows by consolidating patient information collection before or after a session, eliminating separate paperwork processes, saving time, and reducing the risk of missing documents.

VERSATILE FORMS

E-Documents can be templated to mirror all the fields of physical forms, including text boxes, drop-downs, radio buttons, checkboxes, and date fields, making them versatile and efficient for both new and returning patients.

E-SIGN DOCUMENTS

Legally binding documents, such as telehealth consent forms, can be quickly finalized with e-signatures, allowing the session invitation to prompt patients to complete their paperwork and streamline the process for both parties.

SECURE STORAGE OF PATIENT DATA

SecureVideo provides a HIPAA-compliant storage system for confidential health information, meeting all security and privacy standards. Patient data is securely stored and accessible only to authorized personnel in a safe environment.

(ADVANCED CONFIGURATION) API INTEGRATIONS

SecureVideo's API integration ensures seamless data communication by storing detailed forms with auditable digital signatures as PDFs in the EHR or mapping E-Document fields directly to EHR fields, streamlining data management.

These improvements enable telehealth providers to care for patients more efficiently without compromising on quality or security. Reach out to our team at SecureVideo today to see how our E-Documents solution can optimize and safeguard your telehealth operations.
