

3 REASONS YOUR EHR NEEDS A PARTNER LIKE SECUREVIDEO

Your current telehealth system may lack essential features that can enhance your practice and patient outcomes. SecureVideo offers a stand-alone telehealth platform that seamlessly integrates with your existing EHR system, providing necessary telehealth capabilities and additional features to enhance your EHR. Here are three key reasons to consider partnering with SecureVideo.

01

API INTEGRATION

SecureVideo's API is designed for organizations seeking to integrate videoconferencing into their existing applications efficiently and cost-effectively.

The API is built on REST principles and uses HTTP, making it easy to implement.

Our platform also offers account customization and configurable tools, providing healthcare organizations with the flexibility they need to enhance their telehealth services efficiently.

02

WHITE-LABELED TELEHEALTH SOLUTION

SecureVideo allows you to incorporate your logo and brand colors into your virtual waiting room, email notifications, and E-Documents. You may also provide custom technical support contact information (email and phone) if you prefer to provide support for clients and patients in-house. This white-labeled solution ensures that all communications between you and your clients are aligned with your EHR system's branding.

03

FEATURES SUITABLE FOR VARIOUS USE CASES

Our platform offers a variety of features designed to meet diverse healthcare needs. We provide group sessions that accommodate up to 300 participants, remote interpretation services for more accessibility, masked calling for privacy, and hybrid video engines that ensure uninterrupted service by switching between Zoom or One-Click video engines when needed.

SecureVideo improves care coordination and delivery with advanced telehealth features that seamlessly integrate with EHR systems. This allows healthcare providers to offer efficient, high-quality care by ensuring easy access to patient information, leading to better-informed decisions and improved patient outcomes. Contact us today to learn more about how SecureVideo can enhance your telehealth services and seamlessly integrate with your EHR.
